</tr>
</tbody>
</table>

*Must be the same priority as at-risk infant.

Justification

A breastfed infant is dependent on the mother’s milk as the primary source of nutrition. Special attention should therefore be given to the health and nutritional status of the mother (5). Lactation requires approximately 500 additional Kcal per day as well as increased protein, calcium, and other vitamins and minerals (3, 1). Inadequate maternal nutrition may result in decreased nutrient content of the milk (1).
